2022 vintage report

The global harvest in 2022 is estimated by the OIV to be 25.9 billion litres, down 1 per cent compared with 2021. Global wine production has been stable at around 26 billion litres for the past 4 years.

**Northern hemisphere**

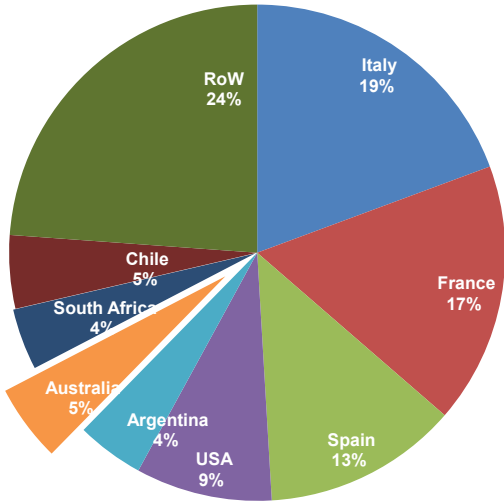

The northern hemisphere harvest was slightly higher than in 2021, with favourable conditions in the two largest EU producing countries (Italy and France), while Spain had a reduced harvest due to drought and limited access to water. The same was generally true for the USA, which is expected to have a harvest 4% lower than last year.

**Southern hemisphere**

After a record high production in 2021, the Southern Hemisphere producers generally had smaller crops compared with the previous year but still above the 5-year average (except for Argentina). Australia had the largest decline, after prevailing La Nina conditions generally produced cool, wet conditions and winemakers made adjustments following the previous record crush.

New Zealand was the exception, producing a record crop in 2022 after being the only Southern hemisphere to have a below-average crop in 2021.

Estimated world wine production by country 2022

Global wine production in 2022 is estimated based on preliminary reports to be just under 26 billion litres. This is 1 per cent below the 2021 harvest and slightly (2 per cent) below the 5-year average. It is the fifth time in the past 6 years that the global vintage has been below average.

## Global Supply Monitor 2022

### Global wine consumption (million litres)

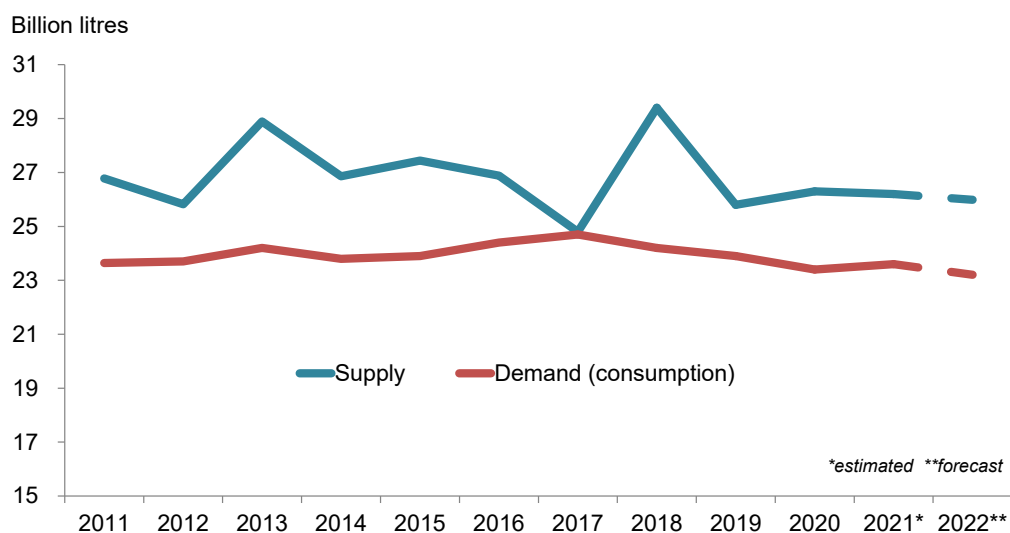

Country	2012	2013	2014	2015	2016	2017	2018	2019	2020	2021*	2022**

Source: OIV and IWSR

\* OIV preliminary figures May 2022

\*\* Wine Australia estimates based on IWSR forecast growth rates.

World wine consumption in 2021 is estimated by the OIV to be 23.6 billion litres, a 1% increase compared with 2020 and slightly higher than earlier forecasts. However, based on IWSR forecasts for growth, consumption in 2022 is expected to decline by 2%, which would mean a total of 23.2 billion litres, the lowest for at least 10 years and 11% below production.

**About Wine Australia:** Wine Australia supports a competitive wine sector by investing in research, development and adoption (RDA), growing domestic and international markets and protecting the reputation of Australian wine.

Wine Australia is an Australian Commonwealth Government statutory authority, established under the Wine Australia Act 2013, and funded by grape growers and winemakers through levies and user-pays charges and the Australian Government, which provides matching funding for RDA investments.

**Disclaimer:** While Wine Australia makes every effort to ensure the accuracy and currency of information within this report, we accept no responsibility for information, which may later prove to be misrepresented or inaccurate, or reliance placed on that information by readers.
